JULY 11, 2007
CHAKRA PRODUCTIONS, LLC

FOR IMMEDIATE RELEASE:

Announcing the Release of yGuide Yoga Software Version 1.7.

Our new version of yGuide Yoga Software raises the bar for yoga teachers, yoga therapists and health professionals to create their own personal branding through wizard-like custom pose creation, custom logos and report titles. Version 1.7 provides more information at your fingertips to make it easier for professionals to rapidly deliver the practices they need.

Adding your own poses to the Pose Library has never been easier. The new Pose Library menu includes options to add, change and delete your own collections. A wizard-like interface provides automatic progression of windows to guide the creation and organization of custom poses into collections. Rapidly create multiple variations of poses and step by step instructions in succession. Easily duplicate pose variations to create flexible options for students and patients.

An enhanced user experience begins with our Quick Start window which delivers information about the five main software features to get anyone started quickly. Window specific help topics are organized to briefly describe functions, provide tips and links to additional information.

Our Pro version enables teachers and health professionals to add custom logos and titles on student practice sheets, workshop handouts and study guides. Personal branding differentiates services and offers an added dimension to the student and patient experience.

This new Windows Vista compatible version is available as a free download for existing customers with previous versions of the software.

Founded in April, 2002, Chakra Productions is located in San Mateo, California. For more information about our new software release, please visit www.yoga-software.com/version17details.aspx
